Rarebookclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1823 Excerpt: .station on the draught may be roughly estimated, it is only necessary to describe small arcs vx, yx, of the circles passing through the points A, E, F, and the point of station. The position may be verified by means of the angle taken from E to D, in the following manner: from the centre a, describe the arc E d, on which measure the arc E e, equal to double the value of the angle under which the side ED had been observed; draw a line through the points D and e, which, being continued, will pass the point of intersection of the circles described on the sides EF and EA; which proves that the point K was the true place of observation at 4 h. 50 m. The position of the point K might also be verified by constructing a circle about the side AF, considered as a chord double the value of the two observed angles AKE, EKF, or on one of the sides AD, DE, DF; but the first method is preferable. Calculation is used, under many circumstances, to find the radii and centres of the circles; but the centres a and b are more frequently found by means of the scale of equal parts, and a good sector, in the following manner: To find the centre a of the circle, of which the side EF is considered as a chord of  $65 \times 2 = 130$ , take the length of EF;...
