By Eliza Ann Youmans

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 60 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1874 Excerpt: . . . by it. This matter will be more fully explained in Course Second. EXERCISE LX. Mosses. In place of flowers, mosses have antheridia and pistillidia. These plants may be either monoecious or dioecious. Fig. 353 represents a moss having its antheridia and pistillidia on different plants. At a you notice a moss-plant with sessile leaves and tmbranched stem, ending in a sort of rosette, which is seen in section at b, where you may observe the peculiar cylindrical bodies growing among the leaves. These are antheridia. One of these bodies, detached and much magnified, is seen at c. The stalk-like bodies accompanying the antheridia (h) are called paraphyses. They are not well understood, but are thought to be abortive states of the antheridia. At first these little organs contain mucilage, but, when mature, their contents, seen escaping at e, are granular, and each of the little ejected...
