The fine portion of the flour was found by him to contain the nitrogen in the first condition, whilst the bran contained the comparatively useless form of nitrogen. A strong argument against the use of whole-meal bread is that the gritty particles which are present in the bran cause an unnatural irritation in the alimentary canal, and lead to a quicker evacuation of the but partially digested and absorbed food. This explains why brown bread possesses laxative properties, and why labourers fed oil it consider that it makes them hungry soon again; they feel that it does not last in the stomach, and consequently think it has little nourishment in it. The Act of 1836 prescribes that bread, except French rolls and fancy bread, must be sold...
