Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1883 Excerpt: . . . The universal experience was that the good effects of Kainite were much more marked in 1881, a very dry year, than in 1882, a very wet one. This is contrary to the notion, at first accepted, that an abundance of water in the soil was necessary to diffuse the injurious (chlorides) into the deeper layers of the soil. We speak again of the cotton plant which is a sun plant, and loves a hot, not too wet, soil. So far from these chlorides doing harm by their presence, the general belief is that they are the main agents of good, owing to their property of holding moisture. A little of it in the row will cause the soil next to the plants to hold moisture in such a degree as to make it look greasy by contrast. So say the planters. Many attribute the whole good effect of Kainite to this property. Mr. W. G. Lewis says: My experience with Kainite during two dry years (1880-81) was very favorable; this year being very wet no manure showed any sign whatever. Dr. E. S. Broadwey, Lenoir county, says: Kainite is an absorbent of moisture, which to the growing plant is more beneficial than rain water. This is about the tenor of the reports on this point. 3. Manner of applying Kainite and the manures to be used with it. Kainite has been applied to cotton, we find, in every conceivable manner and in almost every conceivable combination,...
